

Algebraic equations

Robert Mařík

December 1, 2006

You will solve algebraic equations. Write the solutions as comma separated list, In the case of repeated solution write each solution only **once!**

A

Solve the equation in the set of *real* numbers.

$$x + 1 = 0$$

- Write the solution into the field.
- If there is no solution, write the word *empty*.

$x =$

A

Solve the equation in the set of *real* numbers.

$$2x - 3 = 0$$

- Write the solution into the field.
- If there is no solution, write the word *empty*.

$x =$

Évariste Galois (1811–1832) was a French mathematician born in Bourg-la-Reine. He died in a duel at the age of twenty.

Niels Henrik Abel (1802–1829), Norwegian mathematician, was born in Nedstrand. In early April 1829 he obtained a position in Berlin, but the letter bringing the offer did not reach Norway until two days after Abel's death from tuberculosis.

Both mathematicians proved the impossibility of solving the 5-degree polynomial equation by radicals.
